

Core Technical Skills

- **Programming Languages:** Python, Java, JavaScript, SQL, C
- **AI / Machine Learning:** PyTorch, TensorFlow, Scikit-learn, XGBoost, OpenCV, MediaPipe
- **LLM & AI Systems:** LangChain, LangGraph, Retrieval-Augmented Generation (RAG), Multi-Agent Systems, Semantic Retrieval
- **Data Science & Analytics:** Pandas, NumPy, Matplotlib, Feature Engineering, Power BI
- **Backend & Deployment:** FastAPI, Node.js, Express.js, REST APIs, Docker, Kafka, MLflow, Linux
- **Tools & Platforms:** Git, GitHub, Vercel, Render, VS Code, Google Colab, PyCharm

Professional Experience

Web Development Intern — Sep 2026 – Present

Web Development & Backend Engineering

- Contributing to the development and maintenance of production-oriented web applications, with primary focus on **backend development, REST APIs, database integration, and deployment**.
- Developed and integrated backend functionality using **Node.js, Express.js, and REST APIs**, connecting application workflows with persistent data and frontend components.
- Worked with **Git/GitHub** for version control, collaborative development, debugging, and codebase management.
- Assisted with **production deployment and configuration**, including environment variables, server setup, API configuration, domain connectivity, and deployment troubleshooting.
- Worked with third-party services and payment infrastructure, including **Razorpay API and webhooks**, and performed integration testing before deployment.

Selected Projects

RefluxAI-Advanced — Multi-Agent AI Code Generation and Review Platform | [GitHub](#)

Multi-agent software engineering platform that transforms natural-language requirements into generated, reviewed, tested, secured, and documented code.

- Designed a **6-agent workflow** using LangGraph and Groq LLMs for code generation, review, testing, performance analysis, security auditing, and documentation.
- Implemented structured agent workflows to coordinate tasks across multiple stages of the software development lifecycle.
- Integrated GitHub Pull Request automation and automated quality checks including code complexity analysis, test coverage assessment, and vulnerability detection.

Sentinel AI — Explainable Multi-Stage Fraud Detection System | [GitHub](#)

Explainable AI system for healthcare insurance claim fraud detection combining supervised learning, anomaly detection, deterministic rules, and an agentic review workflow.

- Built an ensemble fraud-scoring pipeline using XGBoost, Isolation Forest, and deterministic fraud signals across **558K+ claims**, with provider-disjoint train/test splitting to reduce data leakage.
- Achieved **81.3% precision, 75.4% recall, 78.2% F1-score, and 91.1% ROC-AUC** on the held-out test set, with an average scoring latency of **311 ms per claim**.
- Developed a LangGraph workflow for claim preprocessing, risk scoring, validation, and LLM-generated explanations using Ollama, providing structured feature contributions for more auditable decisions.

AskDuo — Retrieval-Augmented AI Knowledge Assistant | [GitHub](#)

RAG-powered knowledge assistant that retrieves relevant information from internal documentation and generates source-grounded responses.

- Built a modular Retrieval-Augmented Generation pipeline using LangChain, ChromaDB, OpenAI Embeddings, and GPT-4o-mini for semantic search across organizational knowledge bases.
- Implemented document processing, persistent vector storage, semantic retrieval, and source-grounded response generation with citations for improved answer traceability.

Adaptive Streamer — Real-Time AI Anomaly Detection Platform | [GitHub](#)

Real-time anomaly detection system designed to identify abnormal patterns in streaming data and adapt to changing data distributions.

- Built anomaly detection pipelines using CNN, LSTM, and TCN-based models, integrating ADWIN and Page-Hinkley methods for data drift detection.
- Developed FastAPI APIs and a Streamlit dashboard for serving and visualizing predictions, with Kafka, Docker, and MLflow supporting streaming workflows, deployment, and experiment tracking.

Education

Jayaprakash Narayana College of Engineering, Hyderabad — Expected 2027

Bachelor of Technology (B.Tech) in Artificial Intelligence & Machine Learning

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Machine Learning, Natural Language Processing, Deep Learning

Achievements

- Co-authored and published **2 machine learning research papers** in academic journals.
- Solved **100+ Data Structures and Algorithms problems on LeetCode**, covering arrays, strings, linked lists, trees, graphs, recursion, and dynamic programming.
- Presented AI/ML projects at **Science Fest 2025** and the **ESCI Hyderabad Tech Expo**.
- Developed and showcased AI-based solutions in multiple hackathons and technical competitions.

Research & Publications

- “Car Price Prediction Using Machine Learning”, published in *Research and Reviews: Advancement in Cyber Security* (2025).
- “Future Proofing Real Estate: Machine Learning for Price Predictions”, published in *Advancement of Computer Technology and Its Applications* (2025).

Hackathons & Competitions

- Participated in the **IARE Hackathon**, where I built **Sentinel AI**, an explainable multi-stage AI system for healthcare insurance claim fraud detection.
- Built **LegalShe**, an AI-powered multilingual legal assistance platform, during the **DevQueens Women’s Hackathon**.
- Participated in the **CBIT Hackathon** and **Specathon 2025**, developing AI-based solutions in time-constrained team environments.

Leadership & Activities

- **Technical Event Host & Anchor:** Hosted and moderated college-level technical events, managing speaker transitions, event flow, audience engagement, and coordination with organizing teams.
- **Hackathon Organizer:** Helped organize the college-level **Smart India Hackathon (SIH)** internal hackathon and another campus hackathon, coordinating registrations, participant support, event logistics, and execution.
